<b>1</b>	<b>Intro</b>	<b>1-1</b>
1.1	Some of What We Will Cover . . . . .	1-1
1.2	Some Basic Mathematical Entities in Physics . . . . .	1-1
1.3	Describing Mathematical/Physical Objects and Phenomenon . . . . .	1-3
<b>2</b>	<b>Traditional Vector Theory</b>	<b>2-1</b>
2.1	Fundamental Defining Concepts . . . . .	2-2
	Fundamental Geometrically Defined Concepts . . . . .	2-2
	Subsequent Geometric Concepts . . . . .	2-3
	Fundamental Geometrically Defined Algebraic Operations . . . . .	2-4
	Decomposing Vectors, Part I (Length and Direction) . . . . .	2-5
2.2	Traditional Vector Spaces . . . . .	2-5
	Linear Combinations and Related Notions . . . . .	2-6
	Vector Spaces . . . . .	2-7
2.3	The Dot Product . . . . .	2-10
	Geometric Definition . . . . .	2-10
	Projections and Linearity of the Dot Product . . . . .	2-11
	Components and the Dot Product . . . . .	2-15
2.4	The Cross Product . . . . .	2-16
	Geometric Definition . . . . .	2-16
	Area and Volume and the Cross Product . . . . .	2-17
	Area of a Parallelogram . . . . .	2-17
	Volume of a Parallelepiped . . . . .	2-17
	Linearity of the Cross Product . . . . .	2-18
	Right-Handed Bases and the Classical Formula for the Cross Product . . . . .	2-20
2.5	Triple Products . . . . .	2-21
	The Fundamental Products and the BAC-CAB Rule . . . . .	2-21
	Deriving/Verifying the BAC-CAB Rule . . . . .	2-21
2.6	Reciprocal Bases . . . . .	2-23
<b>3</b>	<b>General Vector Spaces</b>	<b>3-1</b>
3.1	Elementary Complex Analysis . . . . .	3-1
	Basic Ideas, Notation and Terminology . . . . .	3-1
	The Complex Exponential . . . . .	3-2
	Derivation . . . . .	3-4

3.2	General Vector Spaces . . . . .	3–5
	Definition . . . . .	3–5
	Linear Combinations, Basis and Components . . . . .	3–6
	Convenient Notation . . . . .	3–7
	Examples of Vector Spaces . . . . .	3–8
	Vector Subspaces . . . . .	3–10
3.3	Inner Products and Norms . . . . .	3–11
	Definitions . . . . .	3–11
	Examples . . . . .	3–12
	Orthogonality . . . . .	3–13
3.4	Inner Products and Vector Components . . . . .	3–14
	When the Basis is Arbitrary . . . . .	3–14
	When the Basis is Orthogonal, but Not Necessarily Orthonormal . . . . .	3–15
	When the Basis is Orthonormal . . . . .	3–16
3.5	Constructing Orthonormal Sets from Arbitrary Sets . . . . .	3–17
	Normalizing . . . . .	3–17
	Components Orthogonal to a Set . . . . .	3–17
	The Gram-Schmidt Procedure . . . . .	3–19
3.6	“Volumes” of $N$ -Dimensional Hyper-Parallelepipeds (Part I) . . . . .	3–23
	Basics and Notation . . . . .	3–23
	Linear Dependence and Volumes of Hyper-Parallelepiped . . . . .	3–24
	Component Formulas . . . . .	3–25
	Geometric Formulas . . . . .	3–27
<b>4</b>	<b>Elementary Matrix Theory</b>	<b>4–1</b>
4.1	Basics . . . . .	4–1
	Our Basic Notation . . . . .	4–1
	Basic Algebra . . . . .	4–2
	Inner Products of Matrices . . . . .	4–3
	Conjugates, Transposes and Adjoints . . . . .	4–4
	Transposes . . . . .	4–4
4.2	Extending the “Bra – Ket” Notation . . . . .	4–6
	Using an Orthonormal Basis . . . . .	4–6
	Using an Arbitrary Basis . . . . .	4–7
4.3	Square Matrices . . . . .	4–8
	The Zero, Identity and Inverse Matrices . . . . .	4–8
4.4	Determinants . . . . .	4–9
	Definition, Formulas and Cramer’s Rule . . . . .	4–9
	Properties and Applications of Determinants . . . . .	4–11
<b>5</b>	<b>Change of Basis</b>	<b>5–1</b>
5.1	Unitary and Orthogonal Matrices . . . . .	5–1
	Definitions . . . . .	5–1
	Rows and Columns of Unitary Matrices . . . . .	5–2
	An Important Consequence and Exercise . . . . .	5–4
5.2	Change of Basis for Vector Components:	
	The General Case . . . . .	5–5

5.3	Change of Basis for Vector Components:	
	When the Bases Are Orthonormal . . . . .	5–8
	The Main Result . . . . .	5–8
	Finding the Matrices . . . . .	5–10
	Multiple Change of Basis . . . . .	5–11
5.4	Traditional Rotated and Flipped Bases . . . . .	5–11
	Direction Cosines . . . . .	5–11
	Two-Dimensional Case . . . . .	5–12
	Three-Dimensional Case . . . . .	5–13
5.5	Sidenote: Vectors Defined by a Transformation Law . . . . .	5–14
5.6	“Volumes” of $N$ -Dimensional Hyper-Parallepipeds (Part II) . . . . .	5–15
	Recollections from Section 3.6 . . . . .	5–15
	General Component Formulas . . . . .	5–15
	Special Cases . . . . .	5–16
<b>6</b>	<b>Elementary Linear Transform Theory</b>	<b>6–1</b>
6.1	Basic Definitions and Examples . . . . .	6–1
6.2	Matrices for Linear Transforms . . . . .	6–3
	Defining the Matrix in General . . . . .	6–3
	So What? (Using the Matrix) . . . . .	6–4
	Special (but Common) Cases . . . . .	6–6
6.3	Change of Basis for Transform Matrices . . . . .	6–7
6.4	Adjoint of Operators . . . . .	6–9
6.5	Inner-Product Preserving Operators and Unitary/Orthogonal Matrices . . . . .	6–10
6.6	On Confusing Matrices and Linear Operators — A Brief Rant . . . . .	6–11
<b>7</b>	<b>Eigenvectors and Hermitian Operators</b>	<b>7–1</b>
7.1	Eigenvalues and Eigenvectors . . . . .	7–1
	Basic Definitions . . . . .	7–1
	Eigenspaces and Multiple Eigenvalues . . . . .	7–3
	Finding Eigenpairs (Finite-Dimensional Case) . . . . .	7–3
7.2	More Basic “Eigen-Theory” . . . . .	7–8
	Basis Independence of the Characteristic Polynomial . . . . .	7–8
	Eigenvectors as Basis Vectors . . . . .	7–10
	“Diagonalizing” a Matrix . . . . .	7–12
7.3	Self-Adjoint/Hermitian Operators and Matrices . . . . .	7–13
	Some General Background Stuff . . . . .	7–13
	Eigenpairs for Hermitian Operators and Matrices . . . . .	7–14
	The Completeness of the Set of Eigenvectors . . . . .	7–16
	Summary of the Big Results . . . . .	7–19
7.4	Diagonalizing Hermitian Matrices and Operators . . . . .	7–20
	General Ideas and Procedures . . . . .	7–20
	Cheap Tricks . . . . .	7–26
7.5	Spectral Decomposition . . . . .	7–26
<b>8</b>	<b>Multidimensional Calculus: Basics</b>	<b>8–1</b>
8.1	Fundamental Geometric Entities and Concepts . . . . .	8–2
	Spaces of Points/Positions/Locations . . . . .	8–2

	Curves and Angles . . . . .	8–3
	Curves and Distance . . . . .	8–3
8.2	Euclidean-ness . . . . .	8–5
	Euclidean Spaces . . . . .	8–5
	Non-Euclidean Spaces . . . . .	8–7
	So What Is a “Space”?. . . . .	8–8
8.3	Coordinate Systems . . . . .	8–9
	Basics . . . . .	8–9
	Basis-Based Coordinate Systems in Euclidean Spaces . . . . .	8–10
8.4	Describing Curves . . . . .	8–12
	Parametrizations . . . . .	8–12
	Orientation for Curves . . . . .	8–14
	Arclength Parametrization for Curves . . . . .	8–14
8.5	Parametrized Surfaces in $\mathcal{E}^3$ . . . . .	8–15
	Parametrizations . . . . .	8–15
	Surfaces Given by Graphs . . . . .	8–16
	Generalizations . . . . .	8–17
8.6	Differentiation of Position (Along a Curve) . . . . .	8–18
	In Euclidean Space . . . . .	8–18
	In General . . . . .	8–20
	Partial Derivatives . . . . .	8–21
8.7	Tangent Spaces of Vectors . . . . .	8–22
8.8	Scaling Factors and Vectors Associated with Coordinate Systems . . . . .	8–24
	Scaling Factors and Associated Tangent Vectors . . . . .	8–24
	Local Bases and Orthogonality . . . . .	8–29
	The Metric . . . . .	8–29
8.9	The Chain Rule . . . . .	8–30
	In Euclidean Spaces . . . . .	8–30
	The Chain Rule in Non-Euclidean Spaces . . . . .	8–31
	The General Result . . . . .	8–31
8.10	Converting Between Two Coordinate Systems . . . . .	8–31

**9 Multidimensional Calculus:**

	<b>Mainly Differential Theory</b>	<b>9–1</b>
9.1	Motion, Curves, Arclength, Acceleration and the Christoffel Symbols . . . . .	9–1
	Velocity and Speed . . . . .	9–1
	Distance Traveled / Arclength . . . . .	9–3
	Acceleration and the Christoffel Symbols . . . . .	9–4
9.2	Scalar and Vector Fields . . . . .	9–9
	Basic Definitions and Concepts . . . . .	9–9
	Some Warnings . . . . .	9–11
	Change of Coordinates and the Coordinate Formulas . . . . .	9–11
	A Few Words About Continuity and Differentiability . . . . .	9–12
9.3	The Classic Gradient, Divergence and Curl . . . . .	9–13
	Basic Definitions in Euclidean Space . . . . .	9–13
	Invariance Under Change of Cartesian Coordinates . . . . .	9–14
	Product and Chain Rules . . . . .	9–14
9.4	The General Gradient Operator . . . . .	9–15

	Geometric Significance of $\nabla\psi$ . . . . .	9–15
	General Definition and Formula for the Gradient . . . . .	9–17
9.5	General Formulas for the Divergence and Curl . . . . .	9–19
9.6	Repeated Applications of the Del Operator . . . . .	9–21
	General Observations . . . . .	9–21
	The Laplacian . . . . .	9–22
9.7	Multidimensional Differential Operators under Radial Symmetry . . . . .	9–24
<b>10</b>	<b>Multidimensional Integration</b>	<b>10–1</b>
10.1	Integrals over Curves/Paths/Lines/Contours . . . . .	10–1
	Basic Definitions . . . . .	10–1
	Various Notes on Computing Line Integrals . . . . .	10–3
	Coordinate Formulas for Computing Line Integrals . . . . .	10–4
10.2	A Little Potential Theory . . . . .	10–6
	Conservative Vector Fields . . . . .	10–6
	Conservative Vector Fields and “Path-Independence” of Integrals . . . . .	10–7
	Finding the Potential, If Possible . . . . .	10–9
	Comments on the Potentials Being “Well Defined” . . . . .	10–11
10.3	Surface Integrals . . . . .	10–12
	Basic Definitions . . . . .	10–12
	Coordinate Formulas for the Element of Area . . . . .	10–13
	Using Jacobians . . . . .	10–16
10.4	Volume Integrals . . . . .	10–18
10.5	Normal Vector Fields . . . . .	10–19
	General Definitions and Concepts . . . . .	10–19
	Standard Conventions . . . . .	10–20
	Integrals with Normal Vector Fields . . . . .	10–21
	A Brief Physical Interpretation of $\mathbf{F} \cdot \mathbf{n}$ . . . . .	10–21
10.6	The Basic Fundamental Theorem of Multidimensional Calculus . . . . .	10–22
	The Basic Lemma . . . . .	10–23
	Extending the Lemma . . . . .	10–25
10.7	The Classical Theorem of Gauss . . . . .	10–26
10.8	The Classical Theorems of Green and Stokes . . . . .	10–28
	Green’s Theorem . . . . .	10–28
	Stokes’ Theorem . . . . .	10–30
10.9	The General Divergence and Curl . . . . .	10–32
	Coordinate-Free Definitions . . . . .	10–32
	Some Integral Limit Facts . . . . .	10–33
	Divergence in Two Dimensions . . . . .	10–33
	Divergence in Higher Dimensions . . . . .	10–37
	The Curl and Stokes’ Theorem . . . . .	10–38
<b>11</b>	<b>Tensors</b>	<b>11–1</b>
11.1	Two Standard Conventions . . . . .	11–1
	The Kronecker Delta . . . . .	11–1
	The Einstein Convention . . . . .	11–1
11.2	The Reciprocal Basis Fields . . . . .	11–2
11.3	Co- and Contravariant Components of Vector Fields . . . . .	11–3

Definitions . . . . .	11–3
Some Examples . . . . .	11–4
11.4 Converting Between Co- and Contravariant Representations . . . . .	11–6
Components of the Reciprocal Bases with Respect to Each Other . . . . .	11–6
Co/Contra-variant Conversion for Vector Fields . . . . .	11–8
11.5 Converting Between Two Coordinate Systems . . . . .	11–8
11.6 So What Is A Tensor, Anyway? . . . . .	11–11
A Good (but Long) Definition of Tensors . . . . .	11–11
Traditional Definition of Tensors . . . . .	11–12
11.7 And What Is This Mysterious ‘Metric’ That Keeps Popping Up? . . . . .	11–13
11.8 The Metric and the Christoffel Symbols . . . . .	11–14
<b>12 Infinite Series</b>	<b>12–1</b>
12.1 Introduction . . . . .	12–1
12.2 Series of Numbers . . . . .	12–4
Basics on Convergence . . . . .	12–4
The Geometric Series . . . . .	12–7
Convergence Tests for Other Series . . . . .	12–9
Appendix: On the Convergence of Absolutely Convergence Series . . . . .	12–14
12.3 Infinite Series of Functions . . . . .	12–15
Functions as Terms . . . . .	12–15
Convergence and Error Functions . . . . .	12–15
The Importance of Uniform Convergence . . . . .	12–20
12.4 ‘Optional’ Addendum for Section 12.3:	
Abel’s Test . . . . .	12–22
12.5 Power Series . . . . .	12–25
Basics . . . . .	12–25
Radii of Convergence . . . . .	12–25
Uniform Convergence and the Calculus of Power Series . . . . .	12–31
Power Series Representations of Functions . . . . .	12–33
12.6 Power Series of Other Things . . . . .	12–37
12.7 Convergence in Norm . . . . .	12–39
Definition and General Commentary . . . . .	12–39
Some Basic Inequalities . . . . .	12–41
<b>13 Power Series and Differential Equations:</b>	
<b>The Method of Frobenius</b>	<b>13–1</b>
13.1 The Basic Method of Frobenius (Illustrated) . . . . .	13–1
Preliminaries . . . . .	13–1
The Basic Steps . . . . .	13–2
13.2 Practical Advice and Possibly Helpful Comments . . . . .	13–10
13.3 Theory Behind the Method (Without Proofs) . . . . .	13–12
Basic Theory and Ordinary Points . . . . .	13–12
More Advanced Theory . . . . .	13–13
Behavior of Solutions Near Regular Singular Points . . . . .	13–16
More on the Indicial Equation and Complex Solutions . . . . .	13–19
Exercises . . . . .	13–21

<b>14 Complex Analysis I: The Basic Calculus</b>	<b>14–1</b>
14.1 Complex Numbers . . . . .	14–1
14.2 Sets of Complex Numbers . . . . .	14–3
14.3 Functions . . . . .	14–4
Basics . . . . .	14–4
Single-Valued Versus Multi-Valued Functions . . . . .	14–5
Exponential and Trigonometric Functions . . . . .	14–6
The Natural Logarithm . . . . .	14–8
Square Roots and Such . . . . .	14–8
14.4 Derivatives . . . . .	14–9
Partial Derivatives . . . . .	14–9
The Complex Derivative . . . . .	14–10
14.5 Complex Integration Over Curves . . . . .	14–16
Basics . . . . .	14–16
<b>15 Complex Analysis II: Cauchy Integral Theorems and Formulas</b>	<b>15–1</b>
15.1 Relating Integrability with Differentiability . . . . .	15–1
Recalling a Little Potential Theory . . . . .	15–1
Cauchy’s Theorem Relating Integrability with Differentiability . . . . .	15–2
A Converse to the Cauchy Integral Theorem? . . . . .	15–5
15.2 Line Integrals Around “Bad Points” . . . . .	15–6
15.3 Cauchy’s Integral Formulas . . . . .	15–8
The Basic Cauchy Integral Formula . . . . .	15–8
All the Cauchy Integral Formulas . . . . .	15–9
Some Other Consequences of the Cauchy Integral Formulas . . . . .	15–12
15.4 APPENDIX . . . . .	15–14
Goursat’s Proof of the Cauchy Integral Theorem . . . . .	15–14
Maximum Modulus Theorems . . . . .	15–18
<b>16 Complex Analysis III: Laurent Series and Singularities</b>	<b>16–1</b>
16.1 Laurent Series . . . . .	16–1
Derivation and Main Theorem . . . . .	16–1
16.2 Computing Laurent Series . . . . .	16–5
Using Geometric Series . . . . .	16–5
Using Known Taylor or Laurent Series . . . . .	16–8
Products of Laurent Series . . . . .	16–8
16.3 Singularities and the Laurent Series . . . . .	16–11
Singularities at Finite Points . . . . .	16–11
Identifying Singularities in Practice . . . . .	16–14
Zeroes at Finite Points . . . . .	16–16
Singularities and Zeroes at Infinity (A Sidenote) . . . . .	16–17
<b>17 Residue Theory</b>	<b>17–1</b>
17.1 Basic Residue Theory . . . . .	17–1
The Residue Theorem . . . . .	17–1
Computing Residues . . . . .	17–3
17.2 “Simple” Applications . . . . .	17–4
Integrals of the form $\int_0^{2\pi} f(\sin \theta, \cos \theta) d\theta$ . . . . .	17–4

Integrals of the form $\int_{-\infty}^{\infty} f(x) dx$ . . . . .	17–6
Standard “Simple” Tricks . . . . .	17–10
Appendices to this Section . . . . .	17–14
17.3 Integrals Over Branch Cuts of Multi-Valued Functions . . . . .	17–17
17.4 Integrating Through Poles and the Cauchy Principal Value . . . . .	17–21
The Cauchy Principal Value of an Integral . . . . .	17–21
Linearity of the Cauchy Principal Value . . . . .	17–22
Integrating Through Singularities . . . . .	17–23
<b>18 Partial Differential Equations I: Basics and Separable Solutions</b>	<b>18–1</b>
18.1 Intro and Examples . . . . .	18–1
Simple Examples . . . . .	18–1
Basic Terminology . . . . .	18–2
Linearity/Principle of Superposition . . . . .	18–3
General Solutions . . . . .	18–4
18.2 Separation of Variables for Partial Differential Equations (Part I) . . . . .	18–5
Separable Functions . . . . .	18–5
Finding Separable Solutions . . . . .	18–6
Further Notes on this Procedure . . . . .	18–10
18.3 Boundary and Initial Conditions . . . . .	18–11
18.4 Separation of Variables for Partial Differential Equations (Part II) . . . . .	18–12
Superposition and the Role of Boundary and Initial Conditions . . . . .	18–12
The Full Separation of Variables Procedure . . . . .	18–14
A Few Notes . . . . .	18–20
<b>19 Sturm-Liouville Theory</b>	<b>19–1</b>
19.1 Preliminaries to the Sturm-Liouville Theory . . . . .	19–1
Preliminaries to the Preliminaries . . . . .	19–1
The Weight Function and Interval of Interest . . . . .	19–2
The Inner Product and Norm . . . . .	19–2
Generalized Fourier Series . . . . .	19–3
Completeness . . . . .	19–4
19.2 The Sturm-Liouville Theory . . . . .	19–5
The Problem and Basic Terminology . . . . .	19–5
Green’s Formula, Boundary Conditions, and the “Sturm-Liouville Problem” . . . . .	19–8
19.3 The Main Results . . . . .	19–12
Using (Mainly) Hermitian Operator Theory from Last Term . . . . .	19–12
Other Results . . . . .	19–15
19.4 The Main Results Summarized (Sort of) . . . . .	19–18
A Mega-Theorem . . . . .	19–18
Illustrating the Mega-Theorem . . . . .	19–19
19.5 APPENDIX . . . . .	19–21
(Re)Deriving Some Results Already Derived . . . . .	19–21
<b>20 Partial Differential Equations II: Solving (Homogeneous) PDE Problems</b>	<b>20–1</b>
20.1 Problems with Two Variables . . . . .	20–1
Putting It All Together . . . . .	20–1
Summary . . . . .	20–5

What About Convergence? . . . . .	20–6
20.2 Higher Dimensional Problems . . . . .	20–7
General Comments . . . . .	20–7
Heat Flow on a Disk (Part I) . . . . .	20–8
Separating the Variables . . . . .	20–9
The Radial Problem, Slightly Generalized and Simplified . . . . .	20–11
<b>21 Special Functions</b>	<b>21–1</b>
21.1 The Gamma Function . . . . .	21–1
Basic Definition and Identities . . . . .	21–1
The Big Identity for $\Gamma(z)$ , and Factorials . . . . .	21–3
The Extended Definition of the Gamma Function . . . . .	21–4
Even More Formulas and Identities for the Gamma Function . . . . .	21–5
21.2 Bessel Functions of the First Kind . . . . .	21–6
The Frobenius Solutions to Bessel’s Equation . . . . .	21–6
Recursion Formulas and the Generating Function . . . . .	21–10
Qualitative Behavior of Bessel Functions (of the First Kind) on the Real Line . . . . .	21–11
Using the Bessel Functions . . . . .	21–19
21.3 Other Bessel Functions . . . . .	21–20
Bessel Functions of the Second Kind . . . . .	21–21
The Hankel Functions . . . . .	21–22
21.4 Other Special Functions . . . . .	21–22
Even More ‘Bessel’ Functions . . . . .	21–22
And Others . . . . .	21–23
21.5 Appendix: Verifying Identity (21.8) . . . . .	21–24
<b>22 Nonhomogeneous PDE Problems</b>	<b>22–1</b>
22.1 Eigenfunction Expansions of Solutions . . . . .	22–1
<b>A A Brief Review of Elementary Ordinary Differential Equations</b>	<b>A–1</b>
A.1 Basic Terminology . . . . .	A–1
A.2 Some “Analytic” Methods for Solving First-Order ODEs . . . . .	A–2
Separable Equations . . . . .	A–2
Linear Equations . . . . .	A–2
Other Methods . . . . .	A–4
A.3 Higher-Order Linear Differential Equations . . . . .	A–4
Basics . . . . .	A–4
Notes About Linear Independence . . . . .	A–5
Second-Order Linear Homogeneous Equations with Constant Coefficients . . . . .	A–6
Second-Order Euler Equations . . . . .	A–7
Other Methods . . . . .	A–8
Exercises . . . . .	A–9
Some Answers to Some of the Exercises . . . . .	A–12
